

Parent Resource Tool

Below are strategies and activities, **tailored for your child**, that you can do with them at home to improve their understanding of important concepts in reading and math.

Reading

Strategies to improve your child's grade 4 reading understanding

Understanding/Analysis Across Genres

- Read the same book as your child independently, together, or both. Talk about the book as you read it, review main ideas and plot and express your opinions on the book. Then read another book on the same subject. Compare and contrast how both books dealt with the same issue. For example, read two fiction books about family, or two texts about the same historical event.

Understanding/Analysis of Literary Texts

- Set an example. Let your child see you read on a daily basis, too. Talk about the books you are both reading. The more children see a behavior, the more likely they are to mimic the behavior.

Understanding/Analysis of Informational Texts

- Take your child to non-fiction print-rich environments, such as a museum. As you walk around, stop to read and discuss the non-fiction information you see.

Writing Composition, Revision and Editing

- Encourage your child to write regular letters or emails to a relative who lives far away.

Mathematics

Strategies to improve your child's grade 4 math understanding

Numerical Representations and Relationships

- Using a recipe, have your child find equivalent fractions for the amounts shown. For example, $\frac{2}{3}$ cup is equivalent to $\frac{4}{6}$ cup or $\frac{2}{8}$ teaspoon is equivalent to $\frac{1}{4}$ teaspoon.
- Have your child write the equivalent fraction for each monetary value found on a receipt. For example, $\$1.37 = \frac{137}{100}$.

Computations and Algebraic Relationships

- Have your child use everyday objects to create an array of two 2-digit numbers. Associate the array with the multiplication equation. For example, an array of 12 columns and 14 rows would result in a total of 168. The equation would be $12 \times 14 = 168$.

Geometry and Measurement

- Have your child find the length of an object in inches, feet, or centimeters. Ask him what the total units would be if you had 9, 12, or 23 of those objects. For example, the length of a notepad is 8 inches, so 9 notepads would have a total length of 72 inches, because $8 \times 9 = 72$.

Data Analysis and Personal Financial Literacy

- Have your child look at a household budget. Have her identify which items are considered fixed expenses and which items are variable expenses.
- When at a restaurant, ask your child to explain how fixed and variable expenses might affect the restaurant's profit.

Maximize Time During Parent Teacher Conferences

Sample Questions to Ask the Teacher:

- What does my child seem to be the most interested in at school?
- Does my child have good friends in class and at school?
- What is the most important thing that I can be doing to prepare my child for high school?
- Is my child giving his/her best effort?
- What could my child be doing that he or she is not already doing?
- How is my child's work completion in your class?

STAAR Results

STATE OF TEXAS ASSESSMENTS OF ACADEMIC READINESS

2018 STAAR Report Card

About the STAAR Test

Your child took the STAAR in May 2018. This test asks students to answer questions that measure the knowledge and skills they need to be prepared for college or a career. If you have questions about this report, please talk to your child's teacher or principal, or learn more by visiting www.texasassessment.com.

What the Results Mean

This report shows how well your child did on the assessment. There are 4 levels of Performance.

MASTERS GRADE LEVEL

Mastery of the course knowledge and skills is shown — student is on track for college and career readiness.

MEETS GRADE LEVEL

Strong knowledge of course content — student is prepared to progress to the next grade.

APPROACHES GRADE LEVEL

Some knowledge of course content, but may be missing critical elements — student needs additional support in the coming year.

DID NOT MEET GRADE LEVEL

No basic understanding of course expectations is shown — student may need significant support in the coming year.

From the Commissioner

Tests are a part of life. Our kids will take tests to get a driver's license, to get into college, and even to get certain jobs. As a parent of two myself, I know that no one test can tell me everything about my children. But the STAAR tests have been designed to provide useful information about how much our children have learned academically and how well prepared they are for what comes next.

Students who meet or master grade level by high school graduation have more than a 60% chance of passing their college classes, substantially increasing their lifetime earnings and prospects for success. This report is intended to give you information on how well your child learned this year's academic material in school and how you can help them learn even more.

Your Child's Reading Measure History (Lexile® Measure)

The Lexile measure indicates the difficulty of the materials that your child can read successfully.

Here are some books recommended for your child's grade.

- The Curse of the Cheese Pyramid (500L)
- Judy Moody Saves the World (570L)
- Claude Monet (590L)
- A Year Down Yonder (610L)
- Slim's Good-Bye (620L)
- Sarah, Plain and Tall (660L)
- Charlotte's Web (680L)
- On the Banks of Plum Creek (720L)
- Hoot (760L)
- Homeless Bird (800L)
